Executive Summary

Aspiring software developer with strong skills in backend development, AI-based systems, and scalable architectures. Experienced in building real-world solutions like Scheme Bridge, an AI-powered platform for government scheme recommendations. Proficient in Python, APIs, and system design with hands-on experience in Redis-based job processing. Passionate about solving impactful problems and delivering efficient, production-ready solutions.

Technical Skills:

Programming Languages:

- Python, Java, C++

Tools & Technologies:

- Git, Docker, REST APIs, Redis, BullMQ

Databases:

- MySQL, MongoDB

AI/ML:

- Machine Learning, NLP, Recommendation Systems

Other:

- System Design, Backend Development, API Integration

Soft Skills:

- Problem Solving & Adaptability
- Communication & Team Collaboration
- Analytical Thinking & Time Management

Professional Experience:

Vcodez

Month and Year Range: Jan 2025 – April 2025

Role: Intern

Responsibilities:

- Worked on real-world datasets to perform data cleaning and preprocessing
- Applied machine learning algorithms for prediction and classification tasks
- Performed exploratory data analysis (EDA) to identify patterns and insights
- Built models using Python libraries such as Pandas, NumPy, and scikit-learn
- Visualized data using Matplotlib and Seaborn
- Collaborated with team members to improve model performance
- Documented workflows and results for better reproducibility

Impact:

- Improved model accuracy by optimizing features and parameters
- Delivered data-driven insights for decision-making
- Successfully completed multiple ML tasks and mini-projects

Sri Sairam Institute of Technology

Month and Year Range: 2026

Role: Project Contributor

Responsibilities:

- Developed an AI-based recommendation system for government welfare schemes
- Designed backend architecture using client-server API model
- Integrated Redis + BullMQ for asynchronous job processing
- Built scalable APIs for handling multiple admin-generated forms
- Implemented user eligibility filtering using dynamic conditions
- Connected system with Power BI for analytics reporting
- Ensured efficient data flow between frontend, backend, and analytics tools

Impact:

- Reduced manual scheme search effort by ~70%
- Enabled real-time personalized scheme recommendations
- Improved processing efficiency using queue-based architecture
- Scaled system to support multiple concurrent users and admins

Education

Master in Software and Data Science (MSDS)
Apollo Institutions

2025

Awards & Accomplishments:

- Developed Scheme Bridge – AI-based government platform
- Completed projects in Machine Learning & Backend Systems
- Participated in technical and innovation-based projects
- Strong understanding of system design and scalable architectures
